

## Hot AXIOS™

Stent and Electrocautery  
Enhanced Delivery System

## The Hot AXIOS™ Stent and Electrocautery Enhanced Delivery System is indicated to facilitate transgastric or transduodenal endoscopic drainage of:

a pancreatic pseudocyst or a walled-off necrosis with  $\geq 70\%$  fluid content

gallbladder in patients with acute cholecystitis who are at high risk or unsuitable for surgery

the bile duct after failed ERCP in patients with biliary obstruction due to a malignant stricture

The cautery-enhanced access and delivery catheter is advanced through the tissue creating a transluminal conduit between the stomach or duodenal wall and the pancreatic pseudocyst, WON, gallbladder, or bile duct where the pre-loaded stent is deployed to provide drainage.
